

Frontend Developer Internship – Task 3

Weather Application

Name: Abhishek Kushwaha

Role: Frontend Developer Intern

Company: Alfido Tech

Objective

Develop a responsive weather application using HTML, CSS, JavaScript, and OpenWeather API to display real-time weather information for any searched city.

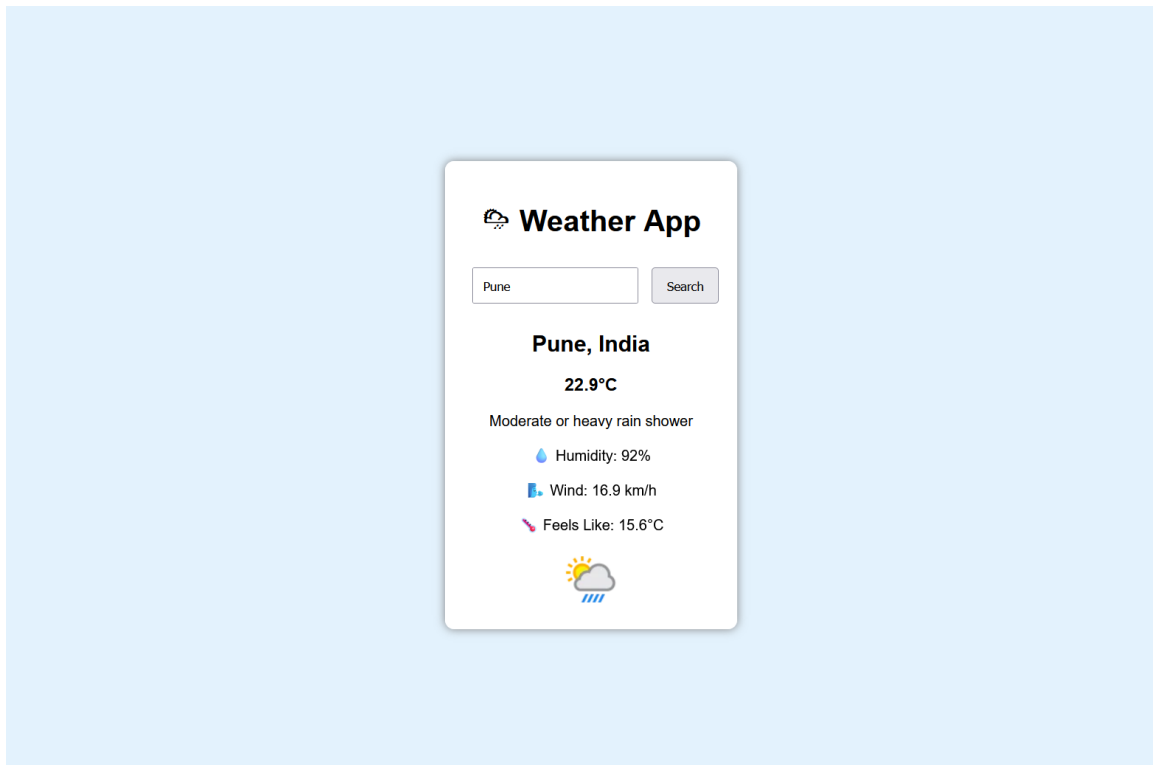

Technologies Used

- HTML5
- CSS3
- JavaScript
- Weather API Key

Features

- Search weather by city
- Temperature
- Humidity
- Wind speed
- Weather icon
- Invalid city handling
- Responsive design

Project Screenshot

Code Snippet

```
async function checkWeather(city) {  
  
  const apiKey = "YOUR_API_KEY";  
  
  const apiUrl =  
`https://api.openweathermap.org/data/2.5/weather?q=${city}&appid=${apiKey}&units=metric`;  
  
  const response = await fetch(apiUrl);  
  
  if (response.status === 404) {  
    alert("City not found");  
    return;  
  }  
}
```

```
const data = await response.json();

document.querySelector(".city").innerHTML = data.name;
document.querySelector(".temp").innerHTML =
  Math.round(data.main.temp) + "°C";
document.querySelector(".humidity").innerHTML =
  data.main.humidity + "%";
document.querySelector(".wind").innerHTML =
  data.wind.speed + " km/h";
}
```

Live Demo

<https://abhishekkushwaha0725-netizen.github.io/API-Integration-Project--Weather-App/>

Output

The application successfully displays real-time weather information with a responsive interface.
